

Infrastructure is a critical enabler of transformation, bringing countries' development paths towards greater sustainability by enabling social and economic growth. The Infrastructure Development Fund (IDF) finances infrastructure projects that can make a significant impact on socio-economic development in developing countries. The Dutch Ministry of Foreign Affairs and FMO established the IDF in 2002 to support private investments in infrastructure by being a first mover or by offering risk capital to make projects bankable so other parties are willing to invest at financial close or at a later stage.
